

The advantages of PURUS plastic pallets

Disposal? Recycling!

Recycling instead of disposing of materials because plastic is a raw material that can be easily conserved. We operate one of the most cutting-edge treatment plants in the world and acts as your partner for environmentally-friendly and profitable disposal of old plastic containers and load carriers. We can work together to conserve this raw material, relieving the pressure on future generations and improving your environmental.

Innovative

We make sure that our products maintain a consistently high level of quality and provide sophisticated application solutions: closed/open lids, metal reinforcements, extremely robust edges and runners, and so much more.

Light

Plastic pallets are generally lighter than comparable wood-based solutions. This is mainly due to the stable light-weight design as well as the lower net weight of the material.

Reliable

Unlike solutions using wood, plastic does not absorb liquids or lose durability and load-bearing capacity with an increased service life.

Expandable

Our plastic pallets can be individually supplemented according to your transport requirements and equipped with additional functions.

Long-lasting

Plastic pallets have a service life that is on average up to 10 times longer than wooden pallets and also remain resilient and maintenance-free even after repeated uses. Moisture, corrosion or chemicals have little effect on the pallets.

Hygienic

Germs and bacteria have no chance due to the smooth, closed surface. Dirt can be removed quickly and easily using commercially available cleaning systems and high-pressure cleaners. There is no need for costly fumigation.

Ideal for transport

Quality requirements are extremely high - particularly in the export segment. The plastic pallet scores points here because there is no need for costly ISPM15-compliant handling or fumigation of pests. An advantage that saves on administrative and handling costs.

FIDUS.
Sustainable & strong.

»LESS WOOD MEANS MORE.«

Pallets made from recycled plastic embody the sustainable use of our resources. They are more hygienic, space-saving and fuel-efficient than most heavier pallets made from wood.

And logistical systems generally benefit from their ease of handling and longer service life because the material is resistant to moisture and other weather conditions.

PURUS pallets are primarily made from our own recycled raw materials. This results in the absolute sustainability of our products!
